```

```
File "/Users/sashnakarniyuk/AI Agent - C
from ai_agents.content_idea_agent imp
ModuleNotFoundError: No module named 'ai_
sashnakarniyuk@sashas-MacBook-Pro AI Agent
```

see that we're missing the `ai_agents` module.
Let me check if we have the necessary files in the
correct structure:

→ Listed 7 items in src

- ↳ Listed 6 items in src/ai_agents

see that we have all the necessary files, but there might be an issue with the Python path. Let's modify the launcher script to ensure it can find all the modules:

Import of

```
# Add the src directory to Python path
sys.path.insert(0, os.path.abspath(os.path.dirname(__file__)))
# Add both the src directory and its parent
src_dir = os.path.abspath(os.path.join(os.path.dirname(__file__), '..'))
sys.path.insert(0, src_dir)
sys.path.insert(0, os.path.join(src_dir, 'src'))
```

```
from src.content_creator_gui import main

if __name__ == "__main__":
    main()
```

Now let's try running the GUI application again:

```
python scripts/launch_gui.py
```
